

NOW, WORLD-CLASS FULL BODY HEALTH CHECKUPS IN INDIA

Health 360- India's first premium segment diagnostic and health checkup centre at Marine Lines, Mumbai offers you a truly world-class diagnostic testing experience.

To begin with, Health 360 has installed the world's fastest 64 slice Cardiac CT Scanner and South East Asia's first Whole Body MRI. It means, Health 360 uses the same diagnostic equipments that you might find at John Hopkins Institute, Mayo Clinic and such other internationally renowned healthcare institutions.

Health 360 takes diagnostic and preventive care in India to an unprecedented level offering end-to-end pathology and diagnostic imaging tests.

That's not all. Spread over a luxurious setting of 10,000 square feet, it boasts spacious rooms, well-appointed interiors and excellent one-on-one service from the Guest Relation Executives, which is bound to put one immediately at ease - both physically and mentally ensuring your brief stay with us is truly pleasurable.

Dr. Shah, the chairman, says: "We have been getting a large number of international clients here who want nothing but the best for their health checkups. We arrange for their entire visit to Mumbai including transportation and hotel stay. After their checkups we even guide them to the appropriate institutions for any follow up

treatment. Senior executives from India's top companies also prefer a place like Health 360, where they get exclusive care and attention while completing their tests."

No wonder, lot of NRI's, expats, and foreigners fly to India for Health checkup.

Health 360 provides a comprehensive range of tests including advanced nutrition, cancer and cardiac markers, Cardiac CT, and Whole Body MRI.

For instance, Cardiac CT allows non-invasive screening of the heart to detect any blockages in the coronary arteries with 99% accuracy, whereas Whole Body MRI screens for any lesions in the body including cancerous ones.

Health 360 also offers the world's most sophisticated equipment for osteoporosis screening. The DXA installed for this purpose is the only machine of its kind in India and screens for osteoporosis at the hip, spine and forearm as recommended by the World Health Organization.

In addition, Health 360 employs high-end technology for Mammography for accurate and precise breast cancer screening. The health checkup packages include Carotid Colour Doppler as well to detect any clots in the arteries that supply blood to the brain, thus preventing the sudden occurrence of a stroke or paralytic attack. While dental treatment can be conducted at the excellent in-house dental clinic, Health 360 also

provides guidance for any other follow up consultations that may be required based on the results from the health checkup.

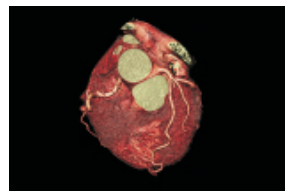

With qualified MD physicians to interpret the results, one is ensured of the highest quality diagnostic testing at Health 360.

A facility such as this is a big boon to India where there is no other private centre of comparable quality. Dr Shah signs off by saying "With the kind of quality we provide, our reports are accepted at the leading health care institutions in the world as indicated to us by our international clients and NRIs."

Tests include:-

Cardiac CT to detect blockage in the coronary arteries on world's fastest 64 Slice Cardiac CT Scanner.

Whole Body MRI to detect any lesions including cancerous lesions in the brain, neck, chest, liver, gall bladder, kidney, pancreas, uterus and ovaries (in females), spine, and lower limbs on South East Asia's first 32 Channel MRI machine.

NM MEDICAL

Daivam Wellness avers, "visa approval for medical reasons are much easier. India provides the best amalgamation of latest scientific technology and ancient healing process. This "best of both worlds" allure boosts medical tourism a few notches. Sometimes the recovery period from a certain illness becomes harder than the treatment itself. In this case, patients are provided with ayurvedic treatments, yoga, meditation, and naturopathy. India gives tourists an opportunity to visit some scenic and awe-inspiring cities rich in culture and heritage. Most of the hospitals and private clinics in the country are now offering a complete Medical Tourism package to foreign patients."

TECH TALK

The Indian Healthcare sector is evolving rapidly after the introduction of new age innovative technologies. It was a history when the healthcare industry was just based on doctor and patient interaction. Today, the healthcare industry involves real time engagement without any geographical limitations, and all this has been possible with the emerging healthcare technologies. "The latest developments are not only limited to diagnosis, treatment and care of several deadly diseases in humans. It has now moved much ahead, where Artificial Intelligence, Big Data, Blockchain and Cloud Technologies have been

implemented to bring healthcare efficiencies and change the healthcare scenario, where at the end, the patient is the beneficiary," says Dr. Satyajit Kumar Singh, Sr. Urologist & Managing Director, Ruban Memorial Hospital & Ratan Hospital for Women & Child, Patna. Dr. Ruchi Gupta, Founder & CEO, 3Hcare.in adds, "with technological advancements, virtual medicines and command centers made easy not only for doctors but also for patients. Through these command centers, reports of ECG and X rays can be easily achieved. Advanced treatment methods like minimally invasive surgeries have eliminated the need of conventional open heart surgeries, which not only
